How do i do a cache cleanup on my phone. What is cache cleanup on my phone. How do i clean up cache on my phone. How do you do a cache cleanup on an android phone. Cache cleanup on android.

(Image credit: Shutterstock) Knowing how to clear Android cache can be a useful skill, especially if you keep finding yourself short on storage space. In some cases, cleaning up your cache can even help speed up a sluggish phone. Caching is when either the OS or apps themselves download temporary files to your device, so that they can be retrieved more quickly for faster operation and load times later. There are two main caches on an Android phone, the Chrome cache and the app cache — read on and we'll show you how to clear both. Cached files can smooth out the experience of using certain apps, though at the same time you don't want your phone or tablet getting bogged down in junk files. For example, Chrome might save files from sites you never visit, while the app cache could take up space with files from apps you used once then abandoned. Your most-used apps can also end up taking gigabyte's worth of space in cache files, so it can be worth having a clean-up now again. The deletion is permanent, though you can rebuild each app's cache by using it normally. 1. Drag down on the home screen, then tap the cog icon to open Settings. (Image credit: Future) 2. Tap "Storage." (Image credit: Future) 3. Tap "Other apps." (Image credit: Future) 4. You'll see a list of all your installed apps, along with how much storage space they're using in total. Tap on an app you want to clear the cache for. (Image credit: Future) 5. Tap "Clear cache." You can also clear the app cache by tapping "Clear data," but this will delete more important data like user logins and settings as well, so don't do this unless you want to start using the app as if it were new. (Image credit: Future) 1. Open Chrome and tap the triple-dot icon. (Image credit: Future) 2. Tap "History." (Image credit: Future) 3. At the top of the History menu, tap "Clear browsing data..." (Image credit: Future) 4. Optionally, you can select a time range from the drop-down menu, so that you're only clearing cached files gained within a certain amount of recency. If you want to delete everything, select "All time." (Image credit: Future) 5. Make sure "Cached images and files" is checked. Uncheck "Browsing history" and "Cookies and site data" unless you're happy deleting those too. Tap the "Clear data" button. (Image credit: Future) 6. If another dialogue box appears, asking to confirm that you want to clear data from specific sites, tap "Clear." (Image credit: Future) Today's best Google Pixel 4a deals (opens in new tab) (opens in new tab) (opens in new tab) Clearing the cache on your Android phone is a good idea from time to time as it may help speed up your device and also give you some additional storage space. This guide will show you everything you need to know to clean the phone cache on your android device. These methods will also work on your Android tablet. There are two options for clearing the cache on your Android phone or tablet, this can be done in your browser on your Android device or you can also clear the app cache on your handset. Follow the steps below for more details on how you can clear the cache on your Android device. How do you clear cache on your Android phone browser? Google's Chrome is one of the most used browsers on Android so this guide will show you how to clear your cache in Chrome on Android. If you clear your cache in Chrome then it will delete all the data and you will need to log in again to any website you want to use. You may also use a different browser on Android, you can clear your cache on alternative browsers in a similar way. The methods to do this may vary slightly by browser but the majority of browsers work in a similar way. Open the Chrome app on your Android Phone Select the three dots at the top right of your device. Click History and then select Clear browsing data. Then choose All Time. That's it the data in your Chrome browser will be cleared. How do you clear the app cache? Clearing the app cache on Android can be a useful way to speed up various apps on your device. This can also clear up some extra space on your phone or tablet if you have a lot of data in these apps. Follow the steps below to clear the app cache on your Phone. This can differ by the manufacturer so you may need to check your handsets guide if the method below does not work. Go to Settings on your smartphone or tablet Select Storage from the menu. Select Other App on your device. Scroll down to the app you want to clear the cache for. Click the Clear Cache button That's it your cache should be cleared. These settings may vary slightly by device and also by the browser on your Android smartphone or Android tablet. We hope you find this guide useful and if you have any questions, please leave a comment below and let us know. You can find out more information about how to clear the cache on your Android phone or tablet over at Google's website. Tap Delete history. Tap Delete to confirm. [Top] Last updated: September 1st, 2022 at 12:36 UTC+02:00 Clear cache Android might sound like foreign words to someone who doesn't know a lot about phones. They might just be aware that their device was made by Samsung or some other Android OEM. Naturally, they wouldn't know how to clear Android cache and indeed why they should do it in the first place. This is a great tip to know if you use an Android phone or tablet. It allows you to free up space and even fix some performance issues that cached files can sometimes cause. Before we dive into how you can clear cache on Android phones, it's important to first know what is cache and why it exists. What is Android cache? The apps on your devices temporarily download files either when you launch them for the first time or continue using them. These files may include images, scripts, videos and other multimedia. It's not just apps. Websites also store a lot of cached data on your device. This is done to improve performance and reduce load times. Since the temporary files are already stored on the device, the app or webpage can load and perform faster. For example, a website will store visual elements in the cache so that they don't need to be downloaded every time you revisit the website. It helps save both time and data. There are two caches on your Android phone that you need to clear. The app cache is where all of the temporary files required by apps are stored. The Chrome cache is the default web browser on Android devices so we're using that as the browser cache here. Other browsers will have their own cache. Why you need to clear cache on Android Now you might be wondering why do I need to learn how to clear cache on Android. You'll be surprised to know that these temporary files can take up gigabytes of storage on your device. If you're using one of Samsung's latest devices that don't have a microSD slot, you'll be well aware of just how precious those extra gigs of storage can be. Mid-range or entry-level devices that aren't super-fast to begin with can really get bogged down once the cache fills up. Clearing the cache can help speed them up a bit. It also frees up valuable storage space. It also happens that sometimes apps and websites can act up. Clearing the cache can address those issues as well. It's not something that you need to do on a daily basis. Once every few months will be fine. It' just best to keep an eye on the cache storage. Once it starts taking up a bit too much, or it feels that the device is being bogged down, go ahead and clear it. How to clear app cache on Android Step 1: To clear app cache, long press on the app icon and tap on the icon in the upper right-hand corner. Scroll down and tap on Storage. The next screen will show you exactly how much storage the app cache is taking up. On non-Samsung phones, you can also access the app list through the Settings menu. Step 2: Tap Clear cache in the lower right-hand corner to immediately delete all of the temporary files stored by the app. How to clear Chrome cache on Android Step 1: Tap on the three-dot icon in the upper right-hand corner followed by History. Step 2: In the History section, tap on Clear browsing data... at the very top. Step 3: Chrome gives you an option to select the time range. Open the dropdown menu and choose the desired range. Selecting All time will clear the entire cache. Step 4: Make sure that the Cached images and files option is selected. You can choose to select the Browsing history and Cookies and site data options as well if you want to delete them too. Otherwise, simply uncheck them. Step 5: Press the Clear data button in the lower right-hand corner to clear the browser's cache. Does clearing the Android cache delete your data? The cache is where temporary files are stored. It has nothing to do with your data. For example, if you clear the cache for Facebook, it won't delete your account or any of your posts, comments, photos, etc. All of the data stored on your device remains untouched. So once you clear Android cache on your phone, all of the contacts are still going to be there. Your photos and videos will be just fine in the gallery. Your music won't be gone and none of your apps will disappear. It's perfectly safe to clear cache on an Android phone or tablet. The temporary files are deleted permanently but that doesn't affect the functionality of your apps or the browser. The cache will slowly rebuild over time. Just think of clearing the cache as deep cleaning. Do it once in a while to keep everything in tip-top shape. Your phone will thank you.
